(54) LIQUID STATE CURABLE RESIN COMPOSITION

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a liquid state curable resin composition which is excellent in prompt curing and gives a cured product having uniformity and transparency, enabling it to provide an optically uniform and high transparent coating material for an optical fiber, a coating material for surfaces of various optical parts, an adhesive, or the like.

SOLUTION: The liquid state curable resin composition contains (a) a urethane (meth)acrylate, (b) a group 4 metal compound and (c) a phosphorus photopolymerization initiator.
